

Abdul Rahim

AI Engineer | Agentic Systems | LLM & Autonomous Workflows

+91 6301999626 | abduhrahimchotu7771@gmail.com | linkedin.com/abdul-rahim-c/

SUMMARY

AI Engineer with 1+ year of experience building production AI systems, autonomous agents, and distributed cloud platforms. Architected a 7-stage AI orchestration platform generating intelligence for 10K+ companies, designed AWS infrastructure processing 125K+ outbound calls/day, and built MCP-powered browser agents using OpenAI Agents SDK and LangGraph for autonomous workflow automation.

TECHNICAL SKILLS

- **AI & Agents:** OpenAI Agents SDK, MCP, LangGraph, LangChain, GPT-4o, Structured Outputs, Tool Calling
- **Languages:** Python, TypeScript, JavaScript, SQL
- **Backend & Cloud:** FastAPI, Node.js, AWS Lambda, SQS, DynamoDB, S3, EventBridge, API Gateway, Docker
- **Databases:** PostgreSQL, MongoDB, Redis, ChromaDB
- **Frontend:** React, Next.js

EXPERIENCE

Consultadd

Software Engineer

Pune

March 2025 – March 2026

BizInsights | Python, FastAPI, LangChain, AWS

- Architected and deployed a 7-stage AI orchestration platform that generated analyst-grade intelligence for 10K+ unique companies across market analysis, competitor research, SWOT analysis, gap identification, solution mapping, and value proposition generation.
- Reduced manual research effort by ~90% through a multi-stage AI enrichment pipeline combining autonomous web crawling, GPT-4o structured extraction, and iterative URL discovery.
- Implemented 20+ Pydantic-based structured-output schemas and asynchronous AI workflows using FastAPI, DynamoDB, and S3, enabling reliable large-scale processing with validated LLM outputs.

AI Voice Campaign Platform | AWS Lambda, SQS, DynamoDB, S3, Plivo, Ultravox

- Architected an event-driven voice automation platform processing 125K+ outbound calls/day while sustaining 180–190 concurrent calls using Lambda, SQS, DynamoDB, and EventBridge.
- Designed queue-based throttling and lifecycle orchestration workflows that enforced strict concurrency limits, automated post-call sentiment analysis, and eliminated 5+ hours of manual reporting effort per week.

PROJECTS

ApplyPilot AI | OpenAI Agents SDK, LangGraph, MCP, Playwright, FastAPI, TypeScript

[GitHub](#)

- Built an autonomous job-application platform using OpenAI Agents SDK, MCP, LangGraph, and Playwright that discovered opportunities and submitted applications across Greenhouse, Lever, SmartRecruiters, and Workday-style ATS systems.
- Designed a hybrid deterministic + agentic architecture combining Playwright automation with GPT-4.1-powered MCP browser agents, enabling reliable handling of dynamic and previously unseen application workflows.
- Developed a LangGraph ReAct agent for multi-query job discovery and LLM-based relevance filtering across recruiting platforms.
- Successfully validated the platform across 200+ application submissions while streaming real-time agent activity and browser automation logs through an SSE-based monitoring layer.

AI Meeting Recorder | Electron, Node.js, Recall AI SDK, PostgreSQL, Google Drive, Slack

[GitHub](#)

- Built a cross-platform desktop application that automatically recorded Google Meet and Zoom sessions using Recall AI, eliminating manual recording setup and meeting management overhead.
- Automated the post-meeting workflow through structured metadata persistence, Google Drive uploads, and Slack notifications using event-driven integrations and OAuth-based authentication.

EDUCATION

SRM University

Guntur, Andhra Pradesh

B.Tech in Computer Science | Minor in AI/ML | CGPA: 8.86 / 10.0

2021 – 2025
